

Benchmark comparison tables — acquisition $\times$ surrogate model

Legend. Each cell is the final metric (mean $\pm$ sd over seeds). **Bold** marks the best model for that acquisition; green marks the single best (acquisition, model) combination for that problem. Lower is better for both metrics.

Table 1: Final regret (value $- f^*$) for every acquisition $\times$ surrogate model ($n_{\text{rep}} = 3$, mean $\pm$ sd over seeds).

Acquisition	Model	Ackley 2-D	Branin	Griewank 2-D	Six-hump Camel
